

Secure Wireless Networks

Designed and installed · Secured and protected

We work with IT departments to help set up new wireless networks and secure and optimize existing networks so that your end users receive the data protection and security that they require.

The consultants assigned to you have from 15 to 21 years of experience with Hewlett-Packard. We are certified security specialists (CISSP and GIAC), factory trained by leading wireless networking companies (Proxim/Orinoco and AirMagnet), and have industry-recognized credentials from Microsoft (Microsoft Certified Systems Engineer) and BICSI (certified specialist in building cabling and electrical protection systems).

Wireless 802.11 networks designed and installed

New wireless networks – We design and install secure wireless networks for your office and your out-of-office employees. We configure, tune, and monitor your wireless network so that your intellectual property remains under your control and doesn't get picked up "over the air" from your parking lot.

Existing networks secured, hardened, protected

Existing networks protected – We secure, harden, and protect your existing wireless network so your users are free to move about your premises and not worry that their emails, files, and intellectual property are being intercepted.

Hardening and protecting your laptops

Protect your sensitive data – We make sure your users have the latest tested security patches, that their laptop files are protected from prying eyes if lost or stolen, and that intrusion attempts are fended off.

Simplifying complex technologies

We help demystify – We work with the latest technologies, so we can help you select the appropriate technologies from the ever growing list: 802.11 a / b / g, 802.1X, WPA, WEP, 802.16 last mile access, 802.1q VLANs, VPNs. We can help you present your proposals to management in understandable terms. As experienced trainers, we can develop a training class for your employees that focuses not on technology – but on what they need to do on a day-to-day basis to maintain information security.

Professionalism

Alignment with your business goals – Based on our professional consulting experience at Hewlett-Packard, we understand how to work with your management team – and your employees at all levels – to align our services and products with your business goals.

About us

In business since 1996 – We have designed, installed, and supported robust networks – wired, in-building wireless, between-building wireless, and campus wireless. Contact us to see how we may help you deploy a wireless network that won't put your proprietary information and intellectual property at risk.
